

JOSHUA DAVIS

Full Stack Software Engineer | C# · ASP.NET Core · Angular · TypeScript · Node.js · Cloud · SQL Server
Albuquerque, NM | joshuad100717@outlook.com | 619-569-6149 | linkedin.com/in/full-stack-engineer-joshd

Eligible to Obtain Top Secret Security Clearance

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 8+ years of enterprise experience delivering production-grade applications across the complete stack: Angular frontends built with TypeScript, ASP.NET Core APIs, Node.js services, SQL Server, and cloud infrastructure across both AWS and Azure environments.

Consistent track record of modernizing legacy systems into maintainable, scalable architectures and driving measurable performance improvements across applications and databases. Comfortable owning end-to-end delivery, from translating business requirements into architecture decisions, through building and shipping features, to supporting production at scale.

Experienced across healthcare, SaaS, government, and manufacturing verticals, adapting quickly to new domains and working effectively with both technical teams and business stakeholders. Known for a collaborative approach, strong communication, and a consistent ability to deliver quality work on time regardless of complexity or pressure.

TECHNICAL SKILLS

Languages and Frameworks: C#, ASP.NET Core, TypeScript, JavaScript, Angular, React, Node.js, SQL / T-SQL

Cloud and DevOps: AWS, Azure, CI/CD pipelines, cloud messaging queues, serverless functions, cloud object storage, Docker, DevOps tooling

Databases: SQL Server, MS-SQL, stored procedures, views, indexing, query optimization, MySQL

Frontend: Angular, React, TypeScript, HTML, CSS, responsive UI, reactive forms, lazy loading, RxJS, reusable components

Backend and API: ASP.NET Core, Node.js, REST APIs, DTOs, FluentValidation, Microservices, Event-Driven Design

Architecture and Patterns: Clean Architecture, Repository Pattern, Dependency Injection, Distributed Systems, Polly resiliency

Tools and Practices: Visual Studio, Git, Agile / Scrum, production support, root-cause analysis, test-driven development

PROFESSIONAL EXPERIENCE

Value Truck

May 2026 - Present

Application Development Manager

- Established and lead the application development function, defining development standards, technical direction, delivery processes, and priorities for internal software initiatives.
- Partner with business leaders across brokerage and asset-based transportation operations to understand distinct workflows, challenges, and technology needs and translate them into practical software solutions.
- Own the design and delivery of applications requested by the business, turning operational requirements into scalable, maintainable tools that improve efficiency, visibility, and decision-making.
- Recruit, train, and mentor development talent, including providing hands-on technical guidance, code reviews, and structured training for a software development intern.
- Manage the full application lifecycle from requirements discovery and architecture through development, deployment, production support, and continuous improvement while aligning technology investments with business priorities.

Kenworth Truck Co.

Jan 2025 - May 2026

Software Engineer

- Designed and implemented ASP.NET Core APIs using layered Clean Architecture, dependency injection, and repository patterns to improve long-term maintainability and team velocity.
- Built workflow-driven features for change order processing including grids, forms, status tracking, and validation logic used daily by operational teams.
- Tuned SQL Server queries and stored procedures, delivering 15 to 25 percent performance improvements in reporting and application response times.
- Built event-driven workflows using cloud-based messaging queues and topics to decouple services and improve reliability at scale.
- Enhanced CI/CD pipelines with environment-specific configuration, validation steps, and structured logging to support safer deployments.
- Partnered directly with business users and operational stakeholders to clarify requirements and deliver enhancements aligned with real-world process needs.

Global Holdings

Jun 2024 - Jan 2025

Software Engineer

- Architected scalable ASP.NET Core APIs using Clean Architecture principles with a focus on separation of concerns and reusable service patterns.
- Improved SQL Server performance through indexing, partitioning, and stored procedure optimization, resulting in approximately 20 percent gains across key data workflows.
- Designed asynchronous workflows using cloud-based object storage and queuing to handle large file ingestion and background processing at scale.
- Implemented resiliency patterns to handle transient failures and improve application stability in distributed environments.
- Enhanced observability through structured logging and correlation IDs, reducing mean time to resolution on production issues.

"Josh had a great, 'we can do that' attitude and willingly accepted the more challenging assignments while we worked together."

— Rodney Cleary, VP of Service Delivery

"He is a highly skilled and reliable developer who consistently delivers high-quality work. Josh always completes his tickets on time, communicates clearly, and responds quickly to any questions or issues."

— Aysim Kudu, Software Development Engineer in Test, Global Holdings

PFA Solutions

Jan 2022 - Jun 2024

Software Engineer

- Delivered full-stack SaaS features using Angular, TypeScript, RxJS, and .NET Core APIs, owning both frontend and backend layers from design through deployment.
- Built scalable backend services with DTO mapping, FluentValidation pipelines, and RESTful API contracts with consistent response handling.
- Designed Angular frontend modules in TypeScript with lazy loading, shared components, and responsive UI patterns to improve performance and maintainability.
- Implemented cloud-native serverless functions and queue-based processing for background automation workflows.
- Improved scalability through caching strategies, EF Core query optimization, and refined data access patterns.

"Josh is truly exceptional to work with. His eagerness to learn and acquire new skills is remarkable, and he consistently channels that curiosity into delivering impressive results."

— Jeanette Hunsberger, Senior AIML Engineer

UnitedHealth Group

Jan 2021 - Jan 2022

Software Engineer

- Built secure Angular and TypeScript applications using reactive forms, route guards, and role-aware UI behavior for HIPAA-compliant healthcare systems.
- Developed ASP.NET Core APIs with JWT authentication, role-based authorization, and secure data access patterns aligned with compliance requirements.
- Resolved production issues by reviewing logs, reproducing defects, and applying targeted fixes in collaboration with QA and product teams.

"Josh is very energetic and proactive, always volunteers or takes initiative for unassigned tasks. Technically strong, easy to work with, dependable and reliable."

— Praneeth Avisa, Sr. Software Test Engineer, UnitedHealth Group / Optum

Wake County Government

Jan 2020 - Jan 2021

Software Engineer

- Developed enterprise .NET Core applications supporting internal government workflows and operational reporting across multiple departments.
- Implemented repository and service patterns to isolate data access, simplify schema evolution, and improve testability.
- Built SQL-based reporting using stored procedures, views, and parameterized queries to support data-driven decision-making.

"Joshua has a 'get it done' attitude and is always willing to tackle any task assigned to him. He works with determination and is never afraid to learn something new."

— Adam Ayres, Solutions Architect and Engineering Leader

Pilot Company

Jun 2019 - Jan 2020

Software Engineer

- Developed full-stack applications using ASP.NET Core, Angular, TypeScript, React, and Node.js for internal and customer-facing business solutions.
- Built a billing platform with React on the frontend and Node.js on the backend, supporting billing workflows, API integrations, and reliable transaction processing.
- Designed and maintained RESTful APIs with strong contracts, standardized response models, and consistent error handling.

"Josh is a determined, sophisticated developer that would make a great asset to any modern application development team. Very knowledgeable with a drive to grow."

— Brandon Carr, Software Engineer III

U.S. Bank

May 2018 - May 2019

Technical Support Specialist

- Provided high-volume technical support for major enterprise clients including Wyndham, Hilton, and Marriott.
- Conducted complex network troubleshooting to ensure seamless communication between payment hardware and software systems.

Markettech

Sep 2017 - Feb 2018

iOS Developer (Contract)

- Developed an iOS application in Swift using Xcode to track call center metrics and surface employee performance data for executive reporting.

Litera

Jan 2016 - Aug 2017

Technical Support Specialist

- Provided high-volume technical support for major clients including Baker McKenzie, ensuring timely resolution of complex software issues.
- Reviewed DLLs and implemented patches to enhance system performance and user experience.

EDUCATION

Juris Doctor Elon University School of Law

B.A. English and Political Science Florida State University
